

Welcome to the Future of MRI

**Insight Medical Imaging
is proud to house the
SIGNA 1.5T Voyager
and 3T Architect,
GE Healthcare's most
versatile, adaptable,
and powerful magnetic
resonance (MR)
systems ever.**

Book An Appointment

For more information or to book an appointment, contact us!

Please have your health care card, doctor's
name, and requisition ready.

Speak With Your Doctor

Insight Medical Imaging accepts requisition
forms from any diagnostic imaging provider.

Booking Hours*

Monday – Friday 8:00 am - 7:00 pm

Saturday 9:00 am - 4:00 pm

Sunday Closed

**hours subject to change*

Cost

Most of our MRI scans fall between \$600 and
\$1200. Please refer to our website or call
Central Booking for current exam costs as
prices are subject to change.

We accept Visa, Mastercard, and Debit.

A Better Patient Experience

1.5T SIGNA Voyager

The newest GE technology provides consistently sharper images thanks to advancements in total digital imaging. This allows our radiologists to provide your doctor with more data for diagnosis. The 1.5T SIGNA Voyager also provides greater accuracy through motion correction capabilities and real-time diaphragm tracking, minimizing chances of misdiagnosis. Our state-of-the-art GE scanner simplifies the imaging process, creating an exceptional patient experience while providing extraordinary image quality.

3T SIGNA Architect

The 3T SIGNA Architect is Edmonton's most advanced GE MRI scanner available to the public. The 3T magnetic field is twice as strong as conventional 1.5T scanners, capturing fine detail beneficial for small joint and brain imaging. Benefits of Insight's 3T SIGNA Architect include shorter scan times, exam orientation flexibility, a more comfortable scanning environment and more quantifiable data for our radiologists and your doctor.

No Radiation Exposure:

This non-invasive procedure uses a magnetic field measured in Teslas (T), radio waves, and a computer to generate images.

Less Noise & Stress:

GE technology can reduce the traditional sound level from 120 dB (rock concert) to 40 dB (ambient noise).

Shorter Scan Times:

Faster exams are extremely beneficial for patients suffering from claustrophobia or discomfort from an injury.

Express Comfort Table:

A softer memory foam surface helps patients relax more during their scan.

A More Spacious Exam:

The tunnel where patients are scanned is four inches wider than older models.

Which Scanner is Right for Me?

MRI is an exceptional exam for many areas of the body including the abdomen, pelvis, musculoskeletal joints, nervous system, and more.

Our highly trained radiologists will decide which MRI scanner is best suited for you based on the medical exam ordered and the unique patient history provided on your requisition.

You're in Excellent Hands

As soon as your exam is completed, our on-site radiologists will review the images and create a detailed analysis.

Their findings are transcribed, and a detailed report is sent to your doctor in a timely manner, usually within one business day. Your doctor will review the report, form a conclusion, and create an actionable treatment plan.

Should your doctor have any questions or concerns about the report, we encourage them to reach out to our radiologists directly. Our team is always willing to work with your doctor towards your pursuit of health and wellness.
